

Press Release

Ferrara (Italy) 5th August 2016

Active Technologies releasing a new generation of AWGs and AFG touch screen control system for the AT 2500 series

All users of AT-AFG 2500 series, may download from active technologies web site , the new version of software control to better handle the functionality of 2500 series using pre-approved commercial tablet systems (Please check with AT in case of inconvenience). The new functionality combined with an ergonomic user interface , better manage the interaction with the AT-AFG 2500 , to make easy and simple the creation of traditional waveform or modulation to be applied using the DDS Technology. This is the first time than AWG software application will be installed and used on modern Windows Tablet. The application could be also installed on a normal windows PC using the mouse to simply the waveform creation. With this application we started our process to define a new generation of disruptive products, easy to be used and with an incredible and efficient user interface. AT is daily focusing on customer experience and listening VOC (Voice of Customers) for any new desire or need to be translated in effective application to be used on the actual or future generation of products. The new version is available on the Active Technologies web site from the 20 of August 2016.

About Active Technologies

Founded in 2002 by a staff of engineers from the University of Ferrara (NE of Italy) involved in large EU research experiments mostly vs. semiconductor test and innovative instrumentation design. Company is evolving to deliver the industry's best signal stimulus solution by using disruptive and innovative DACs proprietary technology. This allows the creation of new generation of very complex signals, combined with controllable jitter, noise and other signal impairments. Our products fits nicely advance research pulse generation providing best in class pulse generation, great solution in complex defense electronics application such radar pulse generation and EW signalling and modulation. Our proprietary DACs technology is the most cost effective solution for a new generation of instruments , lower in cost and easy to be used and adapted in several applications for industrial application such automotive and Power combining best in class performance and price solution. AT is also one of Major supplier of OEM solution for T&M leaders.
